GET RESULTS.

See how others have benefited by using the Collaborative Solutions business model.

SAFETY

Remote monitoring, operator training and close management improved safety, reduced abuse events and drove £85,000 in cost avoidance.

EQUIPMENT

A combination of new, used, rebuilt and non Cat® equipment—safely operated, closely monitored and maintained by qualified technicians—improved availability significantly.

SUSTAINABILITY

Using rebuilt equipment diverted tonnes of material from the waste stream while allowing the owner to reduce costs and recover the second life built into each machine.

PRODUCTIVITY

A production improvement plan consisting of site analysis, haul road upgrades and remote monitoring delivered operational requirements with a right-sized fleet and optimum utilisation.

FINANCIALS

Additional focus on balance sheet, capital management and cash flow had a positive impact on the bottom line.

YOUR SITE. OPTIMISED.

A high-performance site doesn't just happen. You have to build it.

Start with the right people and equipment. Add efficient processes and technologies. Set big goals. Create bold plans. Execute relentlessly. Measure progress. And foster a culture that rewards safety, sustainability, innovation and continuous improvement.

If you're ready to optimise your site, Finning Managed Solutions and Caterpillar can help.
